IRON & STEEL MERCHANTS

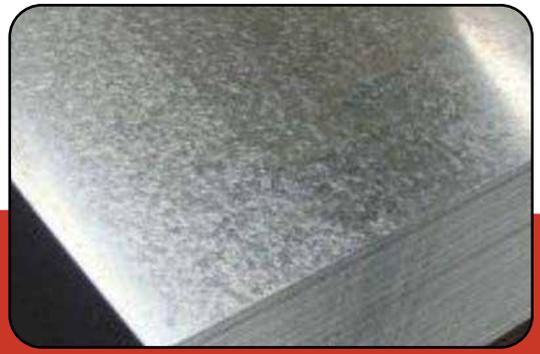

INNOVATING STEEL, **SHAPING TOMORROW**

GP/GC SHEETS

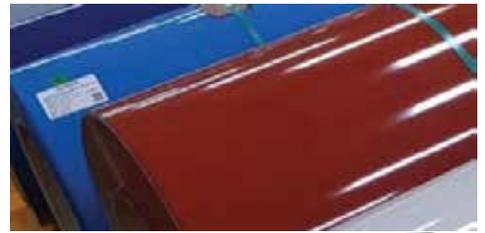

Galvanized Plain (GP) steel comes in flat sheets with a smooth surface, suitable for diverse fabrication needs.

Galvanized Corrugated (GC) steel features a corrugated pattern, offering enhanced strength and stiffness, perfect for roofing and siding in demanding environments like industrial and agricultural settings.

PPGI, PPGL, BGL COILS AND COLOUR ROOFING SHEETS

PPGI, PPGL, and BGL coils and roofing sheets provide durable solutions for various construction needs. PPGI features a paint-coated galvanized iron base, while PPGL utilizes Galvalume steel with enhanced corrosion resistance and heat reflectivity. BGL offers a natural metallic appearance without paint coating. These products are ideal for residential, industrial, and architectural applications, offering longevity and cost-effectiveness in construction projects.

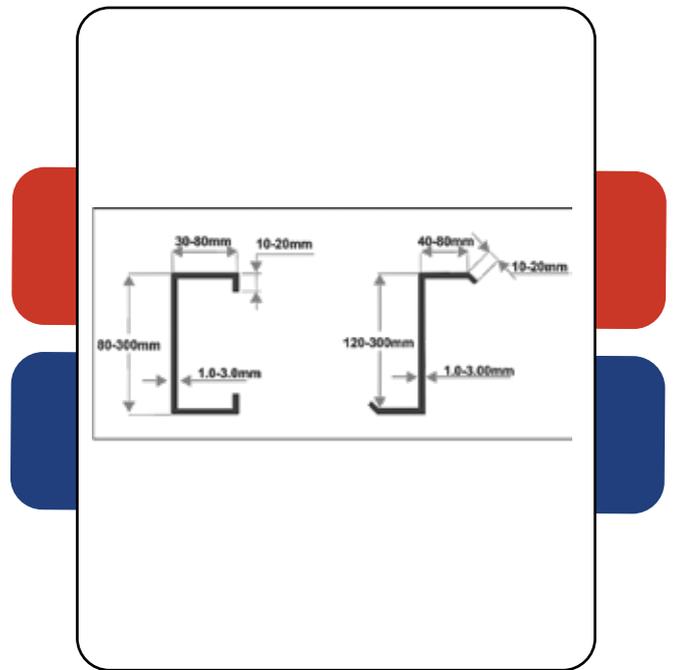

FLOOR DECKING SHEETS

Floor decking sheets are important for modern construction because they provide strong flooring and look good too. Made from tough materials like steel or aluminum, they can handle heavy loads and last a long time without rusting. They're easy to install, saving time and money during building, and match any design. So, whether it's for a new office, warehouse, or home, floor decking sheets are a smart choice for making spaces safe and stylish.

C&Z PURLINS

C&Z purlins are vital structural elements used in construction to support roofs and walls. They offer cost-effectiveness, ease of installation, and durability, making them popular across various building types. With different types available, installation involves simple steps, and regular maintenance ensures their longevity. Ongoing innovations promise continued efficiency and sustainability in construction practices involving C&Z purlins.

OUR SERVICES:

CUT TO LENGTH:

Our precision cut to length service is tailored for accurately cutting metal coils into specific lengths according to your project requirements. Whether you seek standard-sized sheets or customized dimensions, our cutting-edge machinery guarantees precision and uniformity, resulting in top-notch finished products.

SLITTING:

Our slitting service offers meticulous cutting of metal coils into narrower widths, granting flexibility and adaptability in material utilization. Leveraging our advanced slitting lines, we can handle a variety of coil widths and thicknesses, delivering slit coils that adhere to your precise specifications with minimal tolerances.

ROLLFORMING:

With our rollforming service, we shape metal coils into bespoke profiles and shapes to suit the distinct demands of your project. Whether you need standard profiles or personalized designs, our rollforming capabilities enable efficient production of top-quality metal components, ensuring consistent dimensions and exact tolerances.
